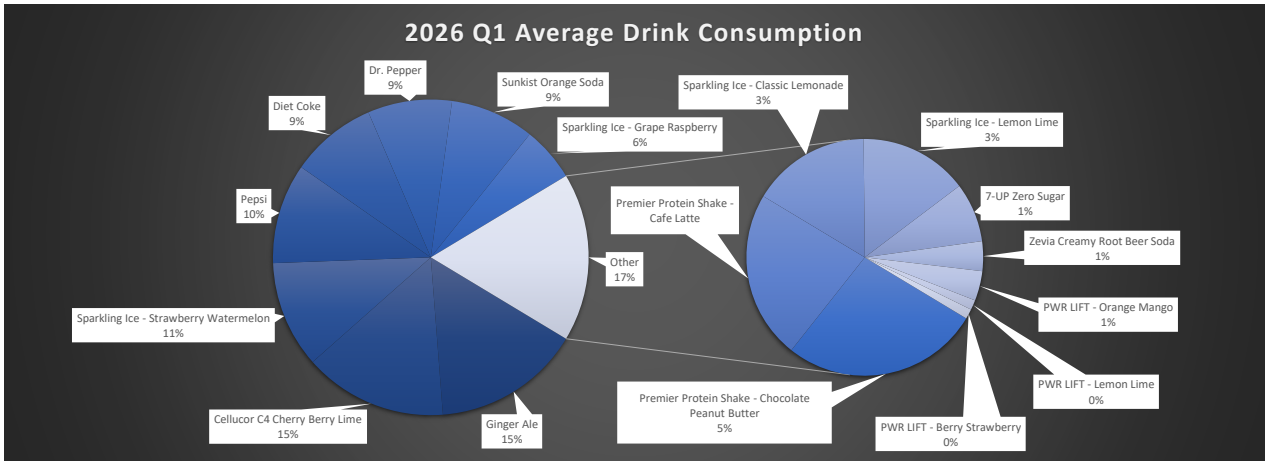
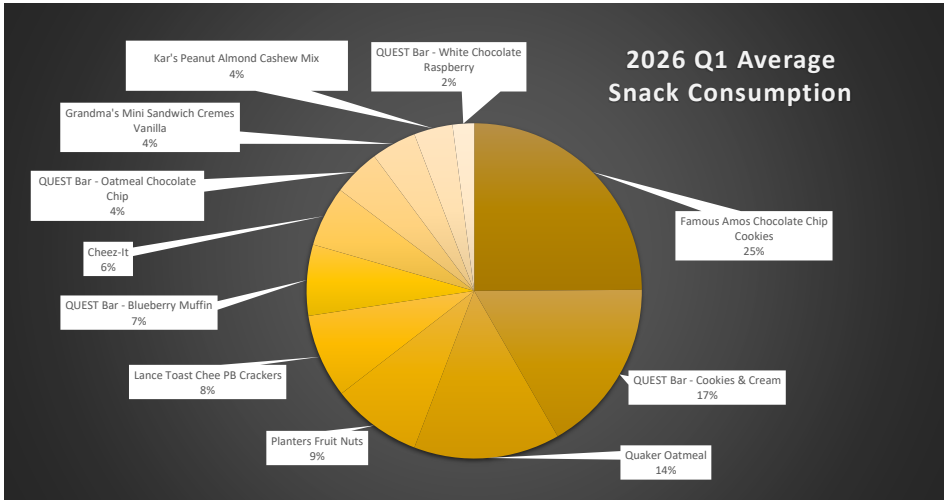
Conclusions

- PWR Lift drinks are so unpopular that it might be best to phase them out. At the current rate these drinks are being taken, we may not even run out of our current supply before they expire in July of this year.




- Premier Protein Shake consumption had a big spike in March. I suspect that number is an outlier and the average will fall to 2 or 3 a month (a 50% drop) next quarter. If that happens, it might be worth reassessing their place in our drink rotation.
